Lot 3 - Développements

MNGT to FAC-CM Interface

Version 2

Generic Information

- For all the packets defined herein,
  - Byte-order is Big Endian
  - Packet exchange is done through a UDP socket
  - Unless stated otherwise there is padding for variable-size fields to make entire packet‘s size multiples of DWORD

Message Header

- Bit 0: vendor/extended message flag (E)
  - Used to indicate that a custom message format is used
  - For vendor specific extension capabilities
- Bit 1: Validity flag (used to indicate of non-existent data)
- Version information (4 bits)
- Priority (Optional, 3 bits)
- Event Type (8 bits)
- Event Subtype (8 bits)

Location

Location Table Request

- Queries the location table for the position vector of a node, given by its GN_Addr
- Query location event generates a Update Location Event.
  - All Location Table can be requested by setting a GN_ADDR with all bytes set to 0xFF

0								1								2								3

Configuration

Configuration Available Event

- Used to notify clients of ITS MGMT of
  - available configurations
  - configuration changes
- Key count indicates the amount of configuration keys available for this client (server always provides this info, but client can ignore this field if this info is not required)

0								1								2								3							
0	1	2	3	4	5	6	7	0	1	2	3	4	5	6	7	0	1	2	3	4	5	6	7	0	1	2	3	4	5	6	7
E	V	R	R	Version				Priority			R	R	R	R	R	Event Type								Event Subtype							
Reserved																Key count (optional)															

Configuration Request

- Used to request MGMT to initiate transmission of a configuration
  - Request single key: continuous transmission mode and conf-id
  - Request all configuration groups: **0xFFFF** as conf-id
  - Request NET layer configuration group: **0xAAAA** as conf-id
  - Request FAC layer configuration group: **0xBBBB** as conf-id

- Transmission mode flag:
  - 0 for continuous transmission mode (default): each key is wrapped in its own message
  - 1 for bulk mode: all-in-1 data blob (a single big message containing all keys)

0								1								2								3							
0	1	2	3	4	5	6	7	0	1	2	3	4	5	6	7	0	1	2	3	4	5	6	7	0	1	2	3	4	5	6	7
E	V	R	R	Version				Priority			R	R	R	R	R	Event Type								Event Subtype							
Conf ID																Trasmission Mode															

Configuration Response Continuous

- Used to declare configuration parameters
- ConfID is mapped to name of configuration parameter
- Encoding of ConfValue determined by Conf-ID
- Size of ConfValue is indicated in Length
  - Field: Length (bytes 6+7) -> is mandatory. Length indicates DWORD-length of „Conf Value“, e.g. Length=2 means ConfValue is actually 8 bytes long

0								1								2								3							
0	1	2	3	4	5	6	7	0	1	2	3	4	5	6	7	0	1	2	3	4	5	6	7	0	1	2	3	4	5	6	7
E	V	R	R	Version				Priority			R	R	R	R	R	Event Type								Event Subtype							
Conf ID																Length															
Conf Value (of size ‘Length’)																															

Configuration Response Bulk

- Bulk transfer message incorporates as many configuration item as indicated by „Key Count“ field

0								1								2								3							
0	1	2	3	4	5	6	7	0	1	2	3	4	5	6	7	0	1	2	3	4	5	6	7	0	1	2	3	4	5	6	7

Conf Value																															
Conf ID																Length (optional)															
Conf Value																															
... (continues up to „key count“)																															

Configuration Notification

- Configuration Notification is used to keep MGMT up to date regarding configuration changes
- There is no continuous version of this message, a single message is goint to be sent for every change
- `Length' field denotes number of bytes (not DWORDS)
- String values are not NULL-terminated, `Length' field should help to parse it properly

0								1								2								3							
0	1	2	3	4	5	6	7	0	1	2	3	4	5	6	7	0	1	2	3	4	5	6	7	0	1	2	3	4	5	6	7

Communication Profile

Communication Profile Request

- The request allows to filter part of the communication profile table setting the bit to 1 where necessary.

- Transport: |BTP_A|BTP_B|TCP|UDP|RTP|STCP|Res|Res|
- Network: |GN|IPv6_GN|IPv6|IPv4| IPv4/v6 |DSMIPv4/v6|Res|Res|

Communication Profile Selection Request

- The request allows MGMT client to select a communication profile according to its needs listed below,

- Latency
- Relevance
- Reliability

0								1								2								3							
0	1	2	3	4	5	6	7	0	1	2	3	4	5	6	7	0	1	2	3	4	5	6	7	0	1	2	3	4	5	6	7
E	V	R	R	Version				Priority			R	R	R	R	R	Event Type								Event Subtype							
Latency								Relevance								Reliability								reserved							

Communication Profile Selection Response

- The response allows MGMT to offer a communication profile based on the criteria set by client

- Request parameters *latency*, *relevance, reliability*, and are sent back to let MGMT client match requests and relevant responses

0								1								2								3							
0	1	2	3	4	5	6	7	0	1	2	3	4	5	6	7	0	1	2	3	4	5	6	7	0	1	2	3	4	5	6	7
